SECTION 1: PURPOSE AND BACKGROUND

Rhode Island reviewed its child support guidelines in 2017. Federal regulation (Title 45 of the Code of Federal Regulations, C.F.R. § 302.56) requires states to review their guidelines at least once every four years, and as part of that review, states must consider economic data on the cost of raising children. The review was conducted by the Child Support Task Force, chaired by Magistrate George N. DiMuro. The Chief Judge selects and invites the members of the Task Force. It includes judges, magistrates, private attorneys, representatives from the State of Rhode Island Office of Child Support Services, attorneys from Legal Services who represent the low-income population, and an attorney from the Economic Progress Institute who also represents the interest of the low-income population. Technical assistance, namely economic analysis, was provided by Dr. Jane Venohr, Center for Policy Research.¹ The Task Force made recommendations to the Chief Judge of the Rhode Island Family Court. The Rhode Island guidelines are set in court rule.

The Task Force met several times to review the guidelines and develop recommendations. One recommendation was to update the schedule of basic support obligations. This report documents the underlying data and assumptions of that schedule.

OVERVIEW OF THE SCHEDULE OF BASIC SUPPORT OBLIGATIONS

At the core of the Rhode Island guidelines calculation is a schedule of basic support obligations. Exhibit 1 provides an excerpt of the updated schedule developed under the direction of the Task Force. Appendix A contains the entire schedule. The support obligation is determined by prorating the obligated parent's share of the basic obligation. For example, if the income of the obligated parent is \$3,000 per month and the income of the parent receiving support is \$1,000 per month, the combined monthly income is \$4,000 per month. The basic obligation for a combined monthly income of \$4,000 for one child, based on Exhibit 1, is \$707 per month. This reflects economic data on how much parents would spend on the child together if they lived in the same household and shared financial resources. The amount for

Exhibit 1: Excerpt from Schedule of Basic Support Obligations						
Combined Monthly Income	One Child	Two Children	Three Children	Four Children	Five Children	Six Children
3300.00	603	926	1137	1270	1397	1518

¹ The Center for Policy Research (CPR) has assisted about 30 states including Rhode Island with guidelines reviews since 2007. CPR is a non-profit organization that provides research, evaluation, and technical assistance to government agencies, courts, and private foundations on issues relating to families and children. More information about CPR can be found at www.centerforpolicyresearch.org.

which each parent is financially responsible is based on each parent's prorated share of \$707. The obligor's prorated share of the parents' combined net income is 75 percent (*i.e.*, \$3,000 divided by \$4,000), which is \$530 per month. This is the basis of the child support obligation, although there may be additional adjustments for other considerations such as work-related childcare expenses or joint/shared physical custody.

SECTION II: ECONOMIC BASIS OF SCHEDULE AND OTHER ASSUMPTIONS

The major assumptions and data underlying the schedule developed under the Task Force's direction are summarized below.

- The schedule is based on the income shares model, which seeks to apportion to the child the amount that the parents would have spent if the household were intact.
- The measurements of child-rearing expenditures underlying the schedule are based on measurements developed by Professor David Betson using the "Rothbarth" methodology to separate the children's share of expenditures from total household expenditures.
- The schedule is based on February 2017 prices.
- The schedule considers federal and state income taxes and FICA in 2017.
- Although the Betson-Rothbarth measurements of child-rearing expenditures reflect expenditures at a national level, the schedule is adjusted for Rhode Island housing prices.
- The schedule incorporates a self-support reserve based on the 2017 federal poverty level for one person (\$1,005 per month).
- The extrapolation formula is based on logged income to the third degree. This is a common functional form in the economic sciences for consumption relating to income.
- The schedule reflects average child-rearing expenditures from ages 0 through 17 years old for Rhode Island families considering the combined incomes of the parents.
- The schedule excludes parental expenditures for child care and the child's share of health insurance premiums and extraordinary, out-of-pocket medical expenses incurred for the children. The schedule includes ordinary, out-of-pocket medical expenses of \$250 per child per year. Even healthy children are likely to incur some medical expenses over the course of the year, such as children's medicine, cough syrup, or some co-pays.

The rest of this section discusses each of these data sources and assumptions in more detail, with the exception of those noted in the last two bullets since these are the same assumptions used in the existing schedule.

INCOME SHARES MODEL

The guidelines model used by a state is a policy decision. Rhode Island is one of 40 states to rely on the income shares model. The income shares model was developed through the 1983–1987 National Child Support Guidelines, which was convened by the Federal Office of Child Support Enforcement (OCSE) to fulfill a congressional request.² At the time, most states did not have statewide child support guidelines. The architect of the income shares model designed it to relate to measurements of child-rearing expenditures and to fulfill the guidelines principles identified by the project's oversight committee, which included a wide range of stakeholders. Examples of some of the principles are the financial responsibility of the children should be shared by the parents who have legal responsibility for the children; child support guidelines should at least cover a child's basic needs, but the child should also share a higher standard of living enjoyed by a parent; the subsistence needs of each parent should be taken into consideration; and each child of a given parent should have a right to that parent's income. One of the major principles is that the child support obligation should allow the children to benefit from the same level of expenditures had the children and both parents lived together.³ The principle applies to children of divorcing and separating parents, as well as never-married parents. In other words, children are treated the same regardless of their parents' decisions to marry, divorce, separate, or never marry.

MEASUREMENTS OF CHILD-REARING EXPENDITURES

The schedule in effect when the Task Force completed its review of the child support guidelines in 2017 was based on measurements of child-rearing expenditures developed by Professor David Betson, University of Notre Dame. Rhode Island, 25 other states, the District of Columbia, and Guam rely on one of Betson's studies of child-rearing expenditures using the Rothbart methodology to separate the child's share of expenditures from total household expenditures. Betson-Rothbart (BR) measurements of child-rearing expenditures were first produced in 1990 from expenditure data from families participating in the 1980–86 Consumer Expenditure Survey (CES).⁴ The most recent BR measurements were produced in 2010 and are based on expenditure data from families participating in the 2004–2009 CES.⁵ The 2010 BR measurements for the basis of the existing Rhode Island schedule.⁶ The BR measurements have not been updated since 2010.

⁶ More information about how the BR 2010 measurements were used to develop the existing schedule is provided in Venohr, Jane. (February 14, 2012). *Rhode Island Child Support Guidelines Review*. Report submitted to the Rhode Island Child Support Task Force by Center for Policy Research, Denver, CO.

There are new studies of child-rearing expenditures that have been developed since 2010. Only one has been adopted as the basis of a state's guidelines: a study by Rutgers University was adopted as the basis of the New Jersey guidelines.⁷ Since the New Jersey measurements of child-rearing expenditures are adjusted to account for New Jersey's relatively high income, they are not appropriate for Rhode Island. The USDA estimates child-rearing expenditures individually for seven expenditure categories (e.g., food, transportation, housing, clothing, health care, child care and education, and miscellaneous expenses), then adds them to develop a total.

Another study that is often considered in the review of guidelines but has not been used to develop a state's guidelines since 2002 is conducted by the United States Department of Agriculture (USDA). The USDA updates its measurements at least biannually. Its most recent study is for 2015. Using expenditures data from the 2011 through 2015 Consumer Expenditure Survey (CES), the USDA found that average child-rearing expenses are \$10,850 to \$25,720 per year for the youngest child in a two-child family in the Northeast in 2015.⁸ The Task Force reviewed what an updated schedule would look like based on the USDA measurements. It would have caused significant increases in the schedule amounts because of differences between the Betson-Rothbarth methodology and USDA methodology. Economists do not agree which methodology best measures actual child-rearing expenditures, but generally agree that any amount between the lowest of credible measurements (such as the Betson-Rothbarth measurements) and highest of credible measurements (such as the USDA) are appropriate amounts for state guidelines.⁹

Arguably, a new (2015) study also measures the child's basic needs.¹⁰ It is arguable because the authors believe that their methodology reflects child-rearing expenditures across all income ranges; however, because it finds implausibly low levels (i.e., food costs below what the federal government measures as the minimum amount to sustain), the amounts have been dismissed because they are less than basic need amounts.¹¹

¹¹ The Minnesota Child Support Task Force has extensively analyzed the findings and posts the information on its website. Minnesota hired both Comanor and Venohr to discuss the report. Both reports are on the Task Force website: <https://mn.gov/dhs/general-public/about-dhs/advisory-councils-task-forces/child-support-task-force.jsp>.

The Task Force decided to continue to use the BR measurements but update them for changes in price level, Rhode Island housing costs, tax rates, and the federal poverty level since the existing schedule was developed.

ROTHBARTH METHODOLOGY

Named after the British WWII economist who derived it, the Rothbart methodology is a marginal cost approach that compares expenditures of two sets of equally well-off households: one set consists of two-parent families with children, and the other consists of couples without children. The difference in their expenditures is presumed to be spent on child rearing. The Rothbart methodology relies on the percentage of total expenditures devoted to adult goods (*i.e.*, adult clothing in Betson's application) to determine equally well-off families. For theoretical reasons, economists also believe that the Rothbart methodology understates actual child-rearing expenditures because it overstates the substitution effect from expenditures solely made for the parents to expenditures made specifically for the child (*e.g.*, parents' may spend less on adult clothing once they have children).¹²

CONSUMER EXPENDITURE SURVEY

Most studies of child-rearing expenditures, including the BR measurements, draw on expenditures data collected from families participating in the Consumers Expenditures Survey (CES) that is administered by the Bureau of Labor Statistics (BLS).¹³ Economists use the CES because it is the most comprehensive and detailed survey conducted on household expenditures and consists of a large sample. The CES surveys about 7,000 households per quarter on expenditures, income, and household characteristics (*e.g.*, family size). In the survey quarters used in the BR4 study (*i.e.*, first quarter of 2004 through the first quarter of 2009), households remain in the survey for five consecutive quarters, with households rotating in and out each quarter.¹⁴ Most economists, including Betson, use three or four quarters of expenditures data for a surveyed family. This means that family expenditures are averaged for about a year rather than over a quarter, which may not be as reflective of typical family expenditures.

In all, the BR (2010) study relies on expenditures/outlays data from 7,846 households in which 2,937 households were childless married couples and 4,909 were married couples with children. The subset of CES households used for the BR4 study consisted of married couples of child-rearing age with no other adults living in the household (*e.g.*, grandparents), households with no change in family size or composition during the survey period, and households with at least three completed interviews. The CES asks households about expenditures on over a hundred detailed items. Exhibit 2 shows the major categories of expenditures captured by the CES.

Betson excludes some expenditure items captured by the CES because they are obviously not child-rearing expenses. Specifically, he excludes contributions by family members to Social Security and

¹²Lewin/ICF. (1990). *Estimates of Expenditures on Children and Child Support Guidelines*. Report to U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation. Fairfax, VA. Page 2-29.

¹³ More information about the CES can be found at <https://www.bls.gov/cex/>.

¹⁴ Survey participants now stay in the survey for four quarters instead of five quarters.

private pension plans, and cash contributions made to members outside the surveyed household. The USDA also excludes these expenses from its estimates of child-rearing expenditures.

Gross and net incomes are reported by families participating in the CES. The difference between gross and net income is taxes. In fact, the CES uses the terms “income before taxes” and “income after taxes” instead of gross and net income. Income before taxes is the total money earnings and selected money receipts. It includes wages and salary, self-employment income, Social Security benefits, pension income, rental income, unemployment compensation, workers’ compensation, veterans’ benefits, public assistance, and other sources of income. Income and taxes are based on self-reports and not checked against actual records.

Exhibit 2: Partial List of Expenditure Items Considered in the Consumer Expenditure Survey	
Housing	Rent paid for dwellings, rent received as pay, parking fees, maintenance, and other expenses for rented dwellings; and interest and principal payments on mortgages, interest and principal payments on home equity loans and lines of credit, property taxes and insurance, refinancing and prepayment charges, ground rent, expenses for property management and security, homeowners’ insurance, fire insurance and extended coverage, expenses for repairs and maintenance contracted out, and expenses of materials for owner-performed repairs and maintenance for dwellings used or maintained by the consumer unit. Also includes utilities, cleaning supplies, household textiles, furniture, major and small appliances and other miscellaneous household equipment (tools, plants, decorative items).
Food	Food at home purchased at grocery or other food stores, as well as meals, including tips, purchased away from home (e.g., full-service and fast-food restaurant, vending machines).
Transportation	Vehicle finance charges, gasoline and motor oil, maintenance and repairs, vehicle insurance, public transportation, leases, parking fees, and other transportation expenditures.
Entertainment	Admission to sporting events, movies, concerts, health clubs, recreational lessons, television/radio/sound equipment, pets, toys, hobbies, and other entertainment equipment and services.
Apparel	Apparel, footwear, uniforms, diapers, alterations and repairs, dry cleaning, sent-out laundry, watches, and jewelry.
Other	Personal care products, reading materials, education fees, banking fees, interest paid on lines of credit, and other expenses.

The BLS also does not include changes in net assets or liabilities as income or expenditures. In all, the BLS makes it clear that reconciling differences between income and expenditures and precisely measuring income are not parts of the core mission of the CES. Rather, the core mission is to measure and track expenditures. The BLS recognizes that at some low-income levels, the CES shows that total expenditures exceed after-tax incomes, and at very high incomes, the CES shows total expenditures are considerably less than after-tax incomes. However, the new income questions used by the BLS ameliorate some of this perceived anomaly at low incomes. The consideration of outlays rather than expenditures at high incomes lessens some of the perceived anomaly at high incomes.

In developing child support guidelines, a long-standing assumption has been that at higher incomes the difference between after-tax income and expenditures is a form of “savings.” This includes traditional savings (*i.e.*, deposits into a bank account) and other contributions to family wealth such as mortgage

principal payments, which are included in CES measurement of expenditures but not in the CES measurement of outlays.

A high level of “savings” seems to contradict reports about the national savings rate being low. However, economists calculate the national savings rate using a different methodology.¹⁵ Some of the differences concern the treatment of housing and medical expenses. When calculating the national savings rate, economists define savings to be the difference between disposable income and consumption. In defining consumption, economists impute the rental value of housing to homeowners even though the rental value may exceed the mortgage payment. Similarly, economists impute the value of all medical services received even though there was insurance coverage and the family incurred no out-of-pocket expense. These imputed values increase consumption considerably and hence, reduce the national savings rate. In fact, the escalating cost of health services contributes significantly to the declining national savings rate.¹⁶

UPDATE TO CURRENT (2017) PRICES

The Betson-Rothbarth measurements underlying the current schedule reflect price levels as of October 2011. They were updated to February 2017 price levels using the Consumer Price Index (CPI). Price levels have increased by 7.6 percent.

UPDATE TO CURRENT (2017) TAX RATES

There is less after-tax income in 2017 than there was in 2011 when the existing schedule was developed. This means there is less income available for child-rearing expenditures. This is important because the Betson-Rothbarth measurements are backed out to a gross-income basis for the child support schedule. The Betson-Rothbarth measurements of child-rearing expenditures relate to total expenditures, which is equivalent to after-tax income if a family spends all of their income and incurs no savings. To develop the existing schedule, BR measurements were backed into a gross-income basis using 20011 federal, state, and local income tax rates. Tax rates were calculated using federal and state income withholding and FICA tax formula. Specifically, the assumption was that all income available for child support is taxable and that it is taxable at ordinary income subject to federal, state withholding, and FICA tax formulas. Tax rates prevailing in 2011 were used to convert gross income based on federal and state employer withholding tax formulas. Taxes were computed assuming (a) a single individual (which is the same tax rate for head-of-household in the withholding formula) and (b) two federal withholding allowances (one for a single exemption and one to simulate the standard deduction), based on IRS instructions.

¹⁵ More information about this difference can be found in California’s guidelines review report. Judicial Council of California (2006). *Review of the Statewide Uniform Child Support Guidelines: 2006*, Administrative Office of the Courts, San Francisco, CA. Available at <http://www.courtinfo.ca.gov/programs/cfcc/pdffiles/csguideline2005.pdf>.

¹⁶ *Ibid.*

The updated schedule relies on the federal and state income and FICA withholding formula in 2017. There are significant changes in all three taxes.

- *The most significant change to the federal tax rate is the restoration of the 39.6 percent tax bracket.* There are also small increases to the amount of the withholding allowance and the income thresholds used for the tax brackets.
- *The highest tax rate under Rhode Island's progressive tax structure has been reduced.* The highest tax rate in 2011 was 9.9 percent, now it is 5.99 percent.
- *More is being taken out for FICA.* As part of the economic stimulus package to combat the Great Economic Recession of 2007–2009, specifically the “Making Work Pay” initiative, there was a two-percentage point reduction in the FICA tax rate in 2011. Instead of paying 6.2 percent for Social Security, workers were required to pay 4.2 percent. The FICA rate has been restored to its normal level of 7.65 percent that includes 6.2 percent for Social Security and 1.45 percent for Medicare.

HOUSING EXPENSES: DIFFERENCES BETWEEN NATIONAL AVERAGE AND RHODE ISLAND

The Betson-Rothbarth measurements are based on national expenditures data. There is insufficient state-level data to develop state-specific measurements. States with below or above average incomes or housing costs often make adjustments to the national data to account for those differences. Exhibit 3 is an excerpt from the 2012 report documenting the housing adjustment made for Rhode Island’s current schedule. The adjustment assumed that those with any savings spend 10 percent more of their income due to Rhode Island’s housing cost that were considerably above the U.S. average at the time the existing schedule was developed.

The housing adjustment only affects those income levels in which families on average had some savings (*i.e.*, families with after-tax incomes greater than about \$3,300 net per month, which was about \$4,200 gross per month when the existing schedule was developed). For incomes below this level, families spend all or more of their income. There was no adjustment for Rhode Island’s higher housing cost for lower incomes. The 10 percent adjustment was derived from Rhode Island homeowners with mortgages. Higher income families are more likely to have mortgages.

Exhibit 3: Excerpt from 2012 Report Documenting Economic Basis of Existing Rhode Island Schedule

Adjustment for Rhode Island Housing Costs

The measurements of child-rearing expenditures are based on national data, the CES, which is described above. The BLS designed the CES to produce a nationally representative sample and samples representative of the four regions (Midwest, Northeast, South, and West). The sample sizes for each state, however, are not large enough to estimate child-rearing expenditures for a specific state. It would take several years and lots of resources for a state to develop a state-specific survey comparable to the CES. Even if a state were able to estimate child-rearing expenditures from state-specific data, it is likely to be about the same as the national average for most states because regional differences are generally nominal for many expenses such as food and transportation.

The household expense that varies the most from region to region is housing. It accounts for about 40 percent of household expenditures. According to the 2009 Census American Community Survey, the median housing costs of Rhode Island households with mortgages is 25 percent more than for the nation as a whole (i.e., median housing costs are \$1,879 per month in Rhode Island compared to \$1,505 per month for the USA.) Using these statistics, when the Betson-Rothbarth measurements of child-rearing expenditures are converted in order to develop the Rhode Island child support schedule, an adjustment is made for Rhode Island's higher housing costs. Specifically, at incomes in which the national data indicates that the family has some sort of savings (i.e., above combined gross incomes of \$5,000 per month) it is assumed that the Rhode Island family spends up to 10 percent more of their after-tax income due to Rhode Island's higher housing costs. The 10 percent is based on the share of total expenditures devoted to housing (i.e., 40 percent) multiplied by 25 percent (the difference between Rhode Island and national housing expenses). So, where the national data indicate families of a particular income level spend 70 percent of their after-tax income, the Rhode Island schedule assumes they spend 80 percent. For incomes where the national data indicate families of a particular income spend nearly all of their after-tax income (e.g., 95 percent of after-tax income), the adjustment is capped such that it is never assumed that a Rhode Island family spends more than 100 percent of their after-tax income.

Since the economic recession, there are fewer families with mortgages and, on average, housing costs for those with mortgages has gone down. However, rents have gone up. Exhibits 4 and 5 illustrate these trends.

Exhibit 4: Changes in Housing Costs over Time: Rhode Island and USA

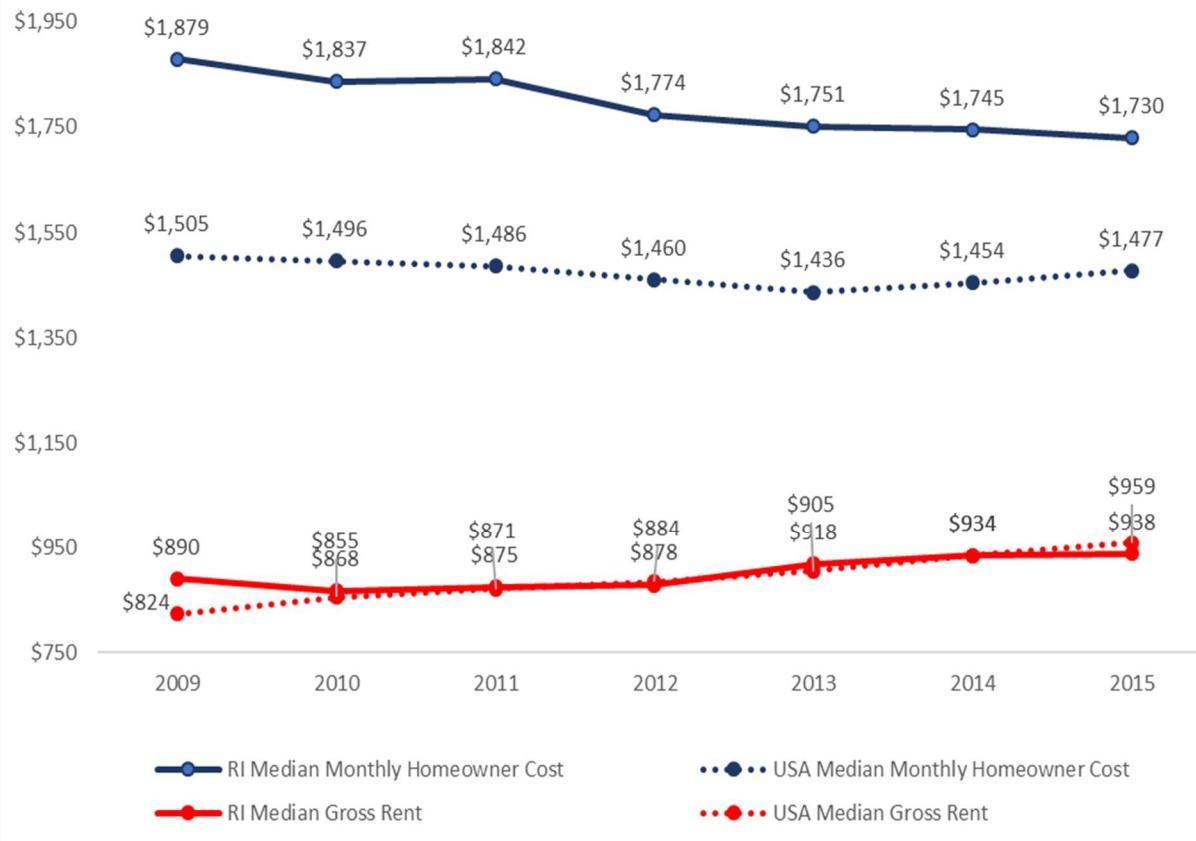

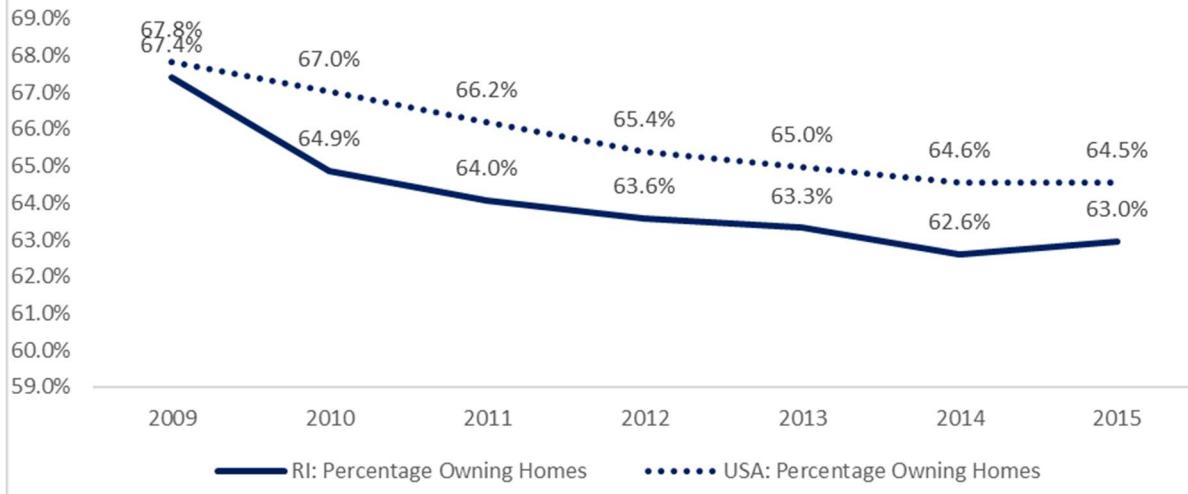

Exhibit 5: Decline in Home Ownership: Rhode Island and USA

The most current economic data on housing costs for those with mortgages suggests a 6.8 percent gap between the United States on average and Rhode Island instead of a 10 percent gap. There are many counter arguments to that.

- Housing costs for those with mortgages did go down, but the Census data is only available through 2015. Recent national trends (e.g., Case-Shiller Index) finds that housing prices generally went up in 2016 and 2017. Zillow reports that Rhode Island housing costs rose 5.8 percent in the last year and predicts another 3.2 percent increase in the next year.¹⁷
- Rents have gone up (see Exhibit 4).
- There are fewer Rhode Island households with mortgages (see Exhibit 5.)
- Retaining the 10-percentage point adjustment at higher incomes and making other updates (*i.e.*, the update for changes in the price level and tax rates) still produces a schedule below what a schedule based on the USDA measurements would be.

After considering these factors, the Task Force directed the economist to develop a bifurcated schedule in which the adjustment for housing based on 2009 U.S. Census data is retained at higher incomes and an adjustment for housing based on 2015 U.S. Census data is applied at lower incomes. Retaining the adjustment at higher incomes recognizes that high-income families still have the same mortgages. Adding the adjustment at lower incomes recognizes that low-income families now face higher rents. The cross point between the two adjustments is at combined incomes of \$6,050 per month. This is also the crosspoints of the two schedules—that is, where they yield the most similar amounts. It also approximates the median income of Rhode Island home-owners.

INCREASE IN THE SELF-SUPPORT RESERVE

The purpose of the self-support reserve is to allow the obligated parent a remaining amount of income after the noncustodial parent's payment of child support and taxes to live at a sustainable level. The self-support reserve is compared to after-tax income, which is a hidden column in the schedule. If the difference between after-tax income and the self-support reserve is less than the obligation amount, an adjustment is made. The existing schedule incorporates a self-support reserve equivalent to the 2011 federal poverty level (FPL) for one person (\$907.50 per month). The proposed schedule is updated to include the 2017 FPL, which is \$1,005 per month.

There are a couple of other adjustments to the self-support reserve. A minimum order of \$50 per month applies. For the phase-out of the self-support reserve, only a percentage of the difference between the after-tax income and the self-support reserve is applied to the schedule amount. This allows for a work incentive—that is, for each dollar earned, some of it is retained by the obligated parent and not all of it is assigned to child support. The adjustment percentages are 90 percent for one child; 91 percent for two children; 92 percent for three children; 93 percent for four children; 94 percent for five children; and 95 percent for six children.

The self-support reserve is phased out when average child-rearing expenditures for an income is less than the self-support reserve formula. This occurs above monthly gross incomes of \$1,600 for one child; \$2,050 for two children; \$2,200 for three children; and \$2,800 for four children; \$3,200 for five children; and \$3,250 for six children.

¹⁷ <https://www.zillow.com/ri/home-values/>.

EXTENDING THE SCHEDULE TO COMBINED INCOMES OF \$35,000 PER MONTH

At very high incomes (*i.e.*, above combined incomes of about \$27,000 per month), there is insufficient number of CES families with very high incomes to know at what rate their expenditures decrease as their income increases. The CES is representative of the nation, so it contains some very high-income families but does not oversample them. Most income shares guidelines limit their schedule to the highest income covered by the study used as the basis of the schedule (*i.e.*, about \$20,000 net per month and \$30,000 gross per month), then provide that the highest amount in the schedule is a floor and court discretion for even a higher amount than the floor. A few income shares guidelines extrapolate the measurements to extraordinary higher incomes so the child support schedule/formula can cover very high incomes. The Task Force requested that the schedule be extended to combined incomes of \$35,000 per month. The extrapolation formula regressed the BR percentage midpoint (*i.e.*, average consumption) on logged income to the third degree. This is a common functional form in the economic sciences for consumption relating to income.

SECTION III: SUMMARY AND CONCLUSION

Rhode Island has reviewed its child support guidelines. It has fulfilled the federal requirement to consider economic data on the cost of raising children. The current schedule, which is the core of the guidelines, is based on measurements of child-rearing expenditures developed by Professor David Betson, University of Notre Dame, using the Rothbart method to separate the child's share of expenditures from total household expenditures. This study has not been updated. There are other updated studies (*e.g.*, the USDA), but they rely on a different methodology for separating the child's share of expenditures total household expenditures. These methodological differences produce different results, and those differences are magnified when used in the schedule. There is no consensus as to which methodology best measures actual child-rearing expenditures. The Task Force could not justify a switch in methodologies when it would produce substantial changes and one methodology is not necessarily better than another. Instead, the Betson-Rothbart measurements were retained as the basis of the existing schedule, but updated for:

- Changes in price levels;
- Changes in federal and state income tax rates and FICA; and
- Changes in the federal poverty level.

In addition, cognizant of increases to rent, an adjustment for Rhode Island's higher housing cost was added to lower incomes. The prior schedule only applied the housing adjustment to higher incomes, which would be the incomes most affected by differences in mortgage costs between Rhode Island and the United States as a whole.

In all, the changes keep the Rhode Island child support guidelines current and better serve children and families.

APPENDIX A: UPDATED SCHEDULE

Combined Monthly Income	Schedule of Basic Support Obligations					
	One Child	Two Children	Three Children	Four Children	Five Children	Six Children
